HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 4-6 and 11-13 are allowed.
2. The following is an examiner's statement of reasons for allowance: The closest prior art of record is Lehmann et al. (IDS: Sensor Proceedings II, 2001, 487-492) in view of Jones (US 3916465: Fig. 1-3; or US 3800602).

The claimed chromatography module including the feature, in which all of the components including the evaluation unit and the control unit being provided on a single circuit board is not rendered obvious over the prior art.

Applicant/appellant argues that (pages 6-7): "A number of different solutions would be available to the skilled person to provide a control and evaluation unit with the Lehmann 2001 device. For example, it could be incorporated into a computer which may also be used to store and display results and, in that case, it would be positioned a distance from the gas chromatograph itself. Alternatively, a control and evaluation unit could be provided in a separate housing. In any event, it is not implicit from Lehmann 2001 that a control and evaluation unit would necessarily be arranged on a circuit board which further comprises an injector, a column, and a detector. Thus, though it may be true that a control and evaluation unit may be present with the Lehmann 2001 device, an ordinary artisan would not have been motivated to arrange this unit on the same circuit board as an injector, separation column, and detector."

The examiner agrees. The examiner also agrees that the claimed phrase "circuit board" in view of the specification impart structural dimensionality to the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

However it is noted that the examiner disagrees with the applicant's/ appellant's arguments regarding: (a) non-obviousness of making the Jones valve miniaturized; (b) the plasma polymerized layer; and (c) the silicon chip of Lehmann being non-equivalent to the claimed circuit board.

(a): Jones' injector or chromatogram (analogues to the instant invention) may dimensionally differ from what is disclosed in the instant application and claimed as being disposed on the circuit board. However, the structure of the injector and the general configuration/arrangement of the chromatogram as claimed are disclosed by the Jones references. The examiner notes that a skilled artisan, who may be interested in making a small chromatogram and contemplating to utilize a known injector with a larger dimension, would be motivated to alter the dimension of the known injector to accommodate the injector in his/her invention. The modification would not have compromised the gas injection function of the Jones's injector.

(b): It is noted that the plasma polymerized coat is explicitly taught by Lehmann (abstract and discussion sections. Furthermore, Jones teaches covering the injector surface with a Teflon coat (Same as the one disclosed). The recitation "plasma polymerized," which is directed to the manner in which a claimed apparatus is made does not distinguish the claimed apparatus from the prior art. The patentability of the claim is based on the recited product and does not depend on its method of production.

(c): The phrase "circuit board" does not require the element to be of a particular material. The limitation only requires a substrate that may be used to provide a circuitry. A silicon chip is a well known material for displacing a small circuitry (such as an imagery CCD sensor).
